

Masonry Javascript Plugin  
Zachary Lincoln

I chose the masonry plugin after having used it recently to create a pinterest-like app where dynamically sized images needed to be displayed efficiently and aesthetically. The tiled style grid has become especially trendy in photography and fashion galleries across the web, and would be extremely difficult to rebuild from scratch. In combination with another plugin, imagesLoaded, the effect can be achieved with ease. With a full suite of methods and options, there is no better choice!
