WIA Project: Camel's Hump Woodworking
Zachary Lincoln
7/31/14

I was recently hired to redesign the website for [Camel's Hump Woodworking](). Looking at the requirements for this project, I knew they'd be a perfect fit for each other. I chose a monotone wood-like color scheme that pairs well with Vermont, and jives well with their imagery. A large CTA on the homepage directs users to contact the company, and additional information on the page sells their main products - the 'ultimate bread knife' and ski racks. The site's gallery shows off their craftsmanship. Overall, the redesign does a much better job at relaying the quality of their products.

Requirements:
- jQuery Effects
  - main.js:20
    - .animate used to change opacity of images in the gallery once they've been laid out with Masonry
  - main.js:32
    - .fadeIn/Out used to display info boxes within Interactive Map.
- Modernizr
  - main.js:4
    - .load used to check for browser support regarding html5 video & canvas
    - Packaged yepnope.js pulls in polyfill if needed
- Interactive Map
  - contact.html
    - Clicking stars overlaid toggles info boxes
- Interactive Image Gallery
  - gallery.html
    - Combination of Masonry & Lightbox plugins to create an efficient layout and show a larger version of image on click
- HTML5 Video
  - home.html
    - Video tags with source options to cover all browsers. .mp4 and .ogv contained for each instance.
- Canvas
  - Running short on time, I choose to take the hit here. There are no canvas elements within the project.
